## DETAILED ACTION

### *Claim Objections*

1. Claims 3, 5, 9, and 11 are objected to because of the following informalities:

- "scan-expose" (e.g. claim 3, lines 14-15) should be – scan-exposing – or – scan-exposure --.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

How is the distance between the recording medium and the light source measured while the light source is being moved by the light scanning apparatus?

Art Unit: 2861

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 2, 7, 8, the method has no steps.

The remaining claims are also rejected under 35 U.S.C. 112, second paragraph, for being dependent upon a rejected base claim.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Bridges (US 6,075,549).

Art Unit: 2861

Bridges discloses the following claimed features of the invention:

- a method for controlling exposure (Figs. 1, 2), wherein a recording medium (16) is irradiated with a light beam emitted from a light source (column 3, lines 40-41) which is moved along one of main scanning and sub-scanning directions by a light source scanning apparatus (1), the recording medium being moved (column 3, lines 59-61) along the other of the main scanning and the sub-scanning directions, to scan-expose the recording medium (column 3, lines 35-40), the method comprising:

- a distance correction processing (means for adjusting position of light source, column 5, lines 63-64), in which during scan-exposing of the recording medium, the light source is moved toward and away from the recording medium synchronously with the movement of the light source by the light source scanning apparatus (column 5, line 63 – column 6, line 15), on the basis of distance correction data which is generated by measuring distance between the recording medium and the light source while the light source is being moved by the light source scanning apparatus (measuring distance is necessary in order to effectively move the light source by a predetermined distance, i.e. one-half of the given distance, column 2, lines 26-29).

It is noted above that the method claims recite no steps.
